

## CARE AND MAINTENANCE

---

To extend the life of your Crosswater reel, always protect the outer frame and spool. We also recommend the following easy maintenance tips:

- ✦ To clean the reel, first rinse off any dirt or grit in cool fresh water.
  - ✦ Use a cloth or toothbrush to carefully remove all sand and grit from the reel with warm soapy water and rinse again.
  - ✦ Separate the spool from the frame and dry thoroughly.
  - ✦ Once dry, reduce the drag pressure to the lowest setting and store in the reel case.
  - ✦ Always store reel away from extreme heat.
  - ✦ After using in saltwater, always take the time to clean your reel. Saltwater can leave a residue that will harden over time if not properly cleaned and dried.
- 

## RETRIEVAL CONVERSION

---

- 1 Remove the spool from the frame by removing the spool lock nut.
  - 2 Using a small phillips head screwdriver, remove the screw in the hub end cap from the end of the main shaft.
  - 3 With the inside of the frame facing up, remove the hub/clutch bearing cover and hub end cap. (Take care not to tip the reel over to avoid losing the clicker assembly).
  - 4 Slide the hex shaped clutch bearing off the shaft and flip the bearing to reverse the retrieve direction.
  - 5 Re-assemble the hub/clutch bearing cover, hub end cap, and spool. (Ensure that the tabs on the underside of the hub end cap screw align with the slot in the end of the main shaft, and that it is securely tightened.)
  - 6 Assure correct retrieve direction and smooth operation.
- 

## WARRANTY INFORMATION

---

Everything Redington makes is built to meet the highest quality standards. To review the owner guarantee on this product, please visit [www.redington.com](http://www.redington.com) and visit our warranty page for more information.

All repairs require the reel be sent to the Redington Warranty Department for service. Questions and inquiries regarding warranty and repair service should be directed to 1-866-498-7243.
